

# Secure Access Service Edge (SASE)

Cloud-ready security, optimised for modern, data-centric workflows and perimeter-less networks

## Networking

- Agile and resilient WAN
- Holistic security ecosystem
- Cloud-scale remote access
- Global acceleration
- Multi-cloud optimisation

## Security

- Software-define capabilities
- Enterprise-grade security at the edge
- Private backbone with traffic optimisation
- Complete access control and threat prevention

## Our technology partners

With hybrid working now firmly established across numerous sectors, phasing out legacy infrastructure in favour of sophisticated Cloud solutions is a critical priority for organisations who are keen to accelerate their digital transformation plans. The new breed of data-centric workflows these shifts have enabled require a new breed of security – one that combines fully secure access to critical applications from anywhere with full control of dataflows in and out of corporate infrastructure.

Exponential-e's managed **Secure Access Service Edge (SASE)** solution represents the convergence of world-class Software-Defined WAN (SD-WAN) and Security Service Edge (SSE) to deliver an end-to-end security solution, fully optimised for the Cloud and modern perimeter-less networks.

- End-to-end protection** against the most sophisticated, aggressive Cloud- and web-based attacks, including phishing, malware, ransomware, and malicious insiders
- Optimise efficiency**, by ensuring all employees have fast, secure access to the applications they depend on – at home, on the move, or at the office
- Streamline security operations**, by automatically applying corporate security and network policies at the edge, on a per-device and per-user basis
- Complete visibility** of the entire security ecosystem, with advanced real-time analytics and reporting

## Why SASE from Exponential-e?

Access to Cloud-based applications now makes up more than half of all internet traffic... but this also makes such platforms the most common target for phishing attacks. As a result, legacy cyber security systems – including SWG's, NGFW's, and endpoint defences – are frequently showing their limitations in the face of an increasingly sophisticated range of attack vectors.

In response, Exponential-e have partnered with a number of Gartner-credited technology partners to deliver a leading-edge SASE solution that brings together the best of networking and network security (including SD-WAN, SWG, CASB, NGFW, and zero-trust network access), offering end-to-end security and visibility for remote workers, on-premises environments, and branch offices.

### Benefits of SASE

- Streamlined management of the security posture for all sites, with the freedom to scale up or down in the future
- Consistent performance and availability of all critical applications
- Implement zero-trust policies, with visibility of all network traffic at a per-user level
- Secure, seamless access to assets for both office workers and remote users, whether this is via public Cloud, private Cloud, or the internet
- Protection against both known attacks and emerging threats, driven by machine learning
- Hands-on support available from our UK-based, 24/7 CSOC, if required

### Available Features

- Advanced Analytics & Reporting
- Secure Web Gateway (SWG)
- Firewall as a Service (FWaaS)
- Cloud Access Security Broker (CASB)
- Data Loss Prevention (DLP)
- Domain Name Security (DNS)
- Endpoint Detection & Response
- Intrusion Detection & Analysis
- Threat Protection
- Client Software Agent for filtering and control
- SSL/TLS Inspection
- URL Filtering
- Web Application Firewall
- Zero-trust Network Access
- Direct-to-net and Direct-to-Cloud access from anywhere
- Integrated SD-WAN access and traffic optimisation into a single brokering service
- Sandboxing Environments

## About Exponential-e?

Exponential-e is a UK leader in Cloud, Connectivity, Communications and Cyber Security, with a unique consultative approach to delivering bespoke, fully integrated solutions that enable scalable, high-performance IT infrastructure. As a trusted technology partner for more than 3,000 companies, our evolving portfolio encompasses everything from public and private cloud to leading-edge SD-WAN and cyber security solutions, supported by our managed IT services.

Our commitment to innovation and customer satisfaction is at the forefront of our endeavours and is reflected in our nine ISO accreditations and industry leading NPS score, updated live on our website.
