Exponential-e's Online Backup solution provides a fully automated, encrypted and intelligent data backup and recovery platform, giving businesses of any size the peace of mind that their data is protected and retrievable.

As a caretaker of our customers' most important asset, their data, we provide innovative solutions to transform traditional IT services and deliver tangible cloud-based solutions for the data centre of tomorrow.

Backup is a key requirement for businesses around the world, ensuring your data and applications are protected should you face a cyber-attack or data loss incident. But the days of tapes are over and instead businesses are now looking for more secure, reliable and extensive solutions.

That's why we're revolutionising backup to meet new, evolving requirements in data protection, archive and Cloud.

Using the latest technology, combined with our private and secure Network and Data Centres, we are able to provide your business with a seamless and efficient backup solution that does more for your organisation.

An Advanced Data Protection Platform

Recovering data faster, capturing data smarter and retaining data better gives you an improved relationship with your backup data thus enabling IT to react and adapt to business needs.

Modernise your IT operations and infrastructure by selecting an Online Backup solution powered by the Cloud. Our single streamlined solution is optimised to support every application and environment.

Efficiently manage low-cost storage and copy only the data that is needed. Now you can ensure that your business is maximising the value of IT assets whilst reducing capital and operating expenditure.

FEATURES

A Unified and Automated Cloud Solution

Manage advanced features via a central platform. Your IT staff can easily backup, recover and access your most important assets across any infrastructure with one solution. A small piece of software installed on your computer or server sends your data automatically and securely for complete peace of mind. Your business will also have better visibility of the tool and the data it is managing, allowing you to make better informed IT and business decisions.

Integrated Protection across any infrastructure

One solution gives you adaptable data protection for operating environments, file systems and a wide range of application protection across physical and virtual environments.

Operating environments and file systems include: Windows, Linux, Mac, Unix, AIX, Solaris, NetApp, EMC, Hitachi and IBM iSeries. Seamless integration protects applications and related data for: Office 365, SharePoint, Exchange & Outlook, OneDrive for Business, Skype for Business, SAP, IBM Notes, Gmail, Google Drive, Google Apps for Work and many more. Automate snapshot management and achieve faster recovery.

Turn backup data into an active strategic asset

Information retrieval is made easy with intelligent indexing. The user-friendly online platform maintains visibility and accessibility however you choose to use the solution. What's more, the solution is native and provides you with immediate access to data, meaning no waiting around for data retrieval whilst it processes. Self-service search greatly reduces end user support burden.

Smart Data Capture & Movement

We are able to offer built-in deduplication at the source, which means moving less data. And as you can dedupe at rest, you are also using less storage.

Intelligent block-level protection greatly reduces the size of stored data capacity, as it tracks and moves only changed blocks, eliminating long scan times and speeding up backups for applications, files and hypervisors by moving them less. What's more no special hardware is required as you can layer upon any disk or Cloud target. Lead the way in data growth with automated content-based retention whilst archiving only the data that holds value.

Secure and Private

Strong 256-bit AES encryption protects the confidentiality of customer data. Deduplicated data copies are moved to off-site or Cloud storage in geo-redundant locations using tier 3 Data Centres. Our solution can also be privately connected into your existing office LAN, increasing security and performance.

BENEFITS

- Ensure business continuity.
- Reduce demands on IT of backup and recovery.
- Efficient storage of data saves time and money.
- Lower risk and complexity.
- Retrieve information faster.
- Meet Compliance requirements.

WHY EXPONENTIAL-E?

Our Cloud Solutions team and security expertise provide you with an agile approach to IT efficiency and business continuity. Gain unparalleled control as Exponential-e are able to deliver flexible solutions including Cloud-based SaaS, Hybrid deployments to utilise on-premise infrastructure and integrated Cloud storage for long-term archiving.

Few enterprises provide the fine-grained indexing and classification to hold just the data that's relevant when required to place a legal hold on company information.

Reduce risk, complexity and costs when it comes to requirements for your storage and compliance.

ABOUT EXPONENTIAL-E

Innovation is at the core of Exponential-e, and has been since our inception in 2002. We wholly own our super-fast Network, and our fusion of complementary technologies - a carrier-class Network and Cloud infrastructure - means we can deliver enterprise applications at wire speed for a superior end-user experience. We deliver scalable, dynamic and bespoke solutions. Renowned for our responsiveness, coupled with our customer centric approach, and a UK based 24 / 7 x 365 service desk, means we offer unrivalled expertise.
